## ACADEMIC POSITIONS

---

- 2022 - Assistant Professor (Biträdande Universitetslektor), Department of Economics,  
Lund University  
2020-2022 Postdoctoral researcher, Department of Economics, Lund University

## OTHER AFFILIATIONS

---

- 2020 - Centre for Economic Demography, Lund University  
2018 - Center for Research in Health and Economics, Universitat Pompeu Fabra  
(CRES-UPF)

## EDUCATION

---

- 2020 PhD in Economics, Universitat Pompeu Fabra  
2015 Master of Research in Economics, Universitat Pompeu Fabra  
2014 MSc in Economics and Finance, Barcelona School of Economics  
2013 Bachelor in Economics, Universidad Carlos III de Madrid

## RESEARCH FIELDS

---

Applied Microeconomics, Health Economics, Labor Economics, and Family Economics

## PUBLICATIONS

---

- “The Long-Run Effects of Cesarean Sections” (with Ana Costa-Ramón, Mika Kortelainen and Lauri Sääksvuori), *Journal of Human Resources*, 57, no. 6 (2022): 2048-2085.
- “Inequality in Mortality between Black and White Americans by Age, Place, and Cause, and in Comparison to Europe, 1990-2018” (with Hannes Schwandt, Janet Currie, Marlies Bär, et al.), *Proceedings of the National Academy of Sciences (PNAS)* 118, no. 40 (2021): e2104684118.
- “Inequality in Mortality in Spain” (with Libertad González), *Fiscal Studies* (special issue) 42, no. 1 (2021): 103-121.
- “It’s About Time: Cesarean Sections and Neonatal Health” (with Ana María Costa-Ramón, Miquel Serra-Burriel and Carlos Campillo-Artero), *Journal of Health Economics* 59 (2018): 46-59.

## WORKING PAPERS

---

- “The Impact of the Female Advantage in Education on the Marriage Market”, Lund University, Department of Economics Working Papers, No. 2021:5.

## TEACHING EXPERIENCE

---

### Teaching

- 2022 Advanced Labor Economics (Master, co-teaching), Advanced Public Economics (Master, co-teaching), Lund University
- 2020-2022 Health Economics (undergraduate), Lund University

- 2018 Causal inference methods for medical research, Hospital Clínic de Barcelona
- 2014-2017 Teaching Assistant, Universitat Pompeu Fabra  
Courses: Introduction to Microeconomics, Introduction to Game Theory, Economics and Analytical Instruments for the Study of Law (Statistics and Game Theory)

### Supervision

- 2021- Co-supervisor of PhD Students, Lund University:  
- Seyedehnegar Khaliliaraghi (expleted completion: 2025)
- 2020- Supervisor of Bachelor and Master theses in Health and Labor Economics, Lund University
- 2018, 2020 Master thesis supervisor, UPF Barcelona School of Management  
Online Master in Health Economics and Pharmacoeconomics

### OTHER WORKING EXPERIENCE

---

- 2017-2018 Research Assistant – Universitat Pompeu Fabra  
Professor Christian Fons-Rosen
- 2016-2018 Research Assistant – Universitat Pompeu Fabra  
Professor Enriqueta Camps Cura
- SEPT 2012-MAR 2013 Intern – R&D Department, Management Solutions, Madrid
- 2010 Research Assistant – Universidad Carlos III de Madrid  
Professor Aurelia Modrego

### GRANTS, SCHOLARSHIPS AND AWARDS

---

- 2022 Yrjö Jahnsson Foundation
- 2022 Pontus Roos Memorial Foundation Stipend
- 2021 Arthur Berge Scholarship, Berge Foundation
- 2021 Arne Ryde Scholarship (small research grant, Lund)
- 2019 Nomination for “La Vanguardia de la Ciencia” award
- 2018 Second prize of iHEA Student Paper Prize
- 2017-2020 Merit-based scholarship FPI, Spanish Ministry of Economy, Industry and Competitiveness
- 2016 Teaching Prize for PhD students, UPF
- 2014-15 Teaching Assistant Scholarship, UPF

### PROFESSIONAL ACTIVITIES

---

#### Seminars, conferences and workshops

- 2022** FUNCAS (Madrid), Dondena Centre (Bocconi, Milan), Centre for Fertility and Health (Norwegian Institute of Public Health, Oslo), IFAU (Uppsala), Swedish Economics Conference (Stockholm), Jacobs Center for Productive Youth Development (University of Zurich)
- 2021** Centre for Economic Demography – Lund University, Universidad de Alicante, SEHO meeting (online), Essen Health Conference (online), ESPE Conference (online), ECOBAS (Universidade de A Coruña), FUNCAS (Madrid)
- 2020** King’s Business School, University of Exeter Business School

- 2019** 3rd SEHO meeting (Lisbon), iHEA conference (Basel), UPF Applied Lunch Seminar (Barcelona), Barcelona-Paris School of Economics Joint Workshop on “Culture and Preferences” (Paris), Universidad Pablo de Olavide (Sevilla)
- 2018** 32nd ESPE Conference (Antwerp), UPF LPD Breakfast Seminar (Barcelona), UPF Economic History Seminar (Barcelona).
- 2017** VI Research Workshop on Public Policy and Healthcare Services Evaluation (EvaluAES - Granada), 31st ESPE Conference (Glasgow)
- 2015** UPF Management and Behavioural Research Breakfast (Barcelona)

### Conference and seminar organization

- 2022** Applied Microeconomics Seminars coordinator, Lund University
- 2022** Arne Ryde Workshop on Gender and Family Wellbeing (Lund) – coorganized with Ana Costa-Ramon and Negar Khaliliaraghi
- 2017** IV Barcelona GSE PhD Jamboree (Barcelona) – co-organizer

### Refereeing activity

Journal of Human Resources, Journal of Demographic Economics, Health Economics, Journal of Economic Behavior and Organization, Review of the Economics of the Household, Journal of Economic Inequality, International Journal of Health Economics and Management

[“The Long-Run Effects of Cesarean Sections”](#) (with Ana Costa-Ramón, Mika Kortelainen and Lauri Sääksvuori), *Journal of Human Resources*, 57, no. 6 (2022): 2048-2085.

This paper analyzes the long-term effects of potentially avoidable C-sections on children’s health. Using Finnish administrative data, we document that physicians perform more unplanned C-sections during their regular working hours on days that precede a weekend or public holiday and use this exogenous variation as an instrument for C-sections. We supplement our instrumental variables results with a differences-in-differences estimation that exploits variation in birth mode within sibling pairs and across families. Our results suggest that avoidable unplanned C-sections increase the risk of asthma, but do not affect other immune-mediated disorders previously associated with C-sections.

[“Inequality in Mortality between Black and White Americans by Age, Place, and Cause, and in Comparison to Europe, 1990-2018”](#) (with Hannes Schwandt, Janet Currie, Marlies Bär, James Banks, Paola Bertoli, Aline Bütikofer, Sarah Cattan, Beatrice Zong-Ying Chao, Claudia Costa, Libertad Gonzalez, Veronica Grembi, Kristiina Huttunen, René Karadakic, Lucy Kraftman, Sonya Krutikova, Stefano Lombardi, Peter Redler, Carlos Riumallo-Herl, Kjell Salvanes, Paula Santana, Josselin Thuilliez, Eddy van Doorslaer, Tom Van Ourti, Joachim Winter, Bram Wouterse and Amelie Wuppermann), *Proceedings of the National Academy of Sciences (PNAS)* 118, no. 40 (2021): e2104684118.

Although there is a large gap between Black and White American life expectancies, the gap fell 48.9% between 1990-2018, mainly due to mortality declines among Black Americans. We examine age-specific mortality trends and racial gaps in life expectancy in rich and poor U.S. areas and with reference to six European countries. Inequalities in life expectancy are starker in the U.S. than in Europe. In 1990 White Americans and Europeans in rich areas had similar overall life expectancy, while life expectancy for White Americans in poor areas was lower. But since then even rich White Americans have lost ground relative to Europeans. Meanwhile, the gap in life expectancy between Black Americans and Europeans decreased by 8.3%. Black life expectancy increased more than White life expectancy in all U.S. areas, but improvements in poorer areas had the greatest impact on the racial life expectancy gap. The causes that contributed the most to Black mortality reductions included: Cancer, homicide, HIV, and causes originating in the fetal or infant period. Life expectancy for both Black and White Americans plateaued or slightly declined after 2012, but this stalling was most evident among Black Americans even prior to the COVID-19 pandemic. If improvements had continued at the 1990-2012 rate, the racial gap in life expectancy would have closed by 2036. European life expectancy also stalled after 2014. Still, the comparison with Europe suggests that mortality rates of both Black and White Americans could fall much further across all ages and in both rich and poor areas.

[“Inequality in Mortality in Spain”](#) (with Libertad González), *Fiscal Studies* (special issue) 42, no. 1 (2021): 103-121.

We analyze the evolution of mortality rates in Spain by age and sex between 1990 and 2018. We compare municipalities, ranked by socioeconomic status (SES) and grouped into bins of similar population size, to study changes in levels but also in inequality in mortality across the SES spectrum. We document large decreases in mortality rates throughout the period for all age groups, including children, even after 2000, and continuing after the Great Recession. These declines are stronger for boys and men, who had higher mortality rates to begin with. We find that inequality in mortality across municipalities was low among the young by 2018, while it was higher among adult men and older women. Inequality in fact increased over the period for older men. We explore the role of different causes of death and find that this increase in inequality is driven by stronger improvements in cancer-related mortality among men living in richer areas. These improvements are not found among women given their increases in mortality due to lung cancer.

[“It’s About Time: Cesarean Sections and Neonatal Health”](#) (with Ana María Costa-Ramón, Miquel Serra-Burriel and Carlos Campillo-Artero) *Journal of Health Economics* 59 (2018): 46-59.

Cesarean sections have been associated in the literature with poorer newborn health, particularly with a higher incidence of respiratory morbidity. Most studies suffer, however, from potential omitted variable bias, as they are based on simple comparisons of mothers who give birth vaginally and those who give birth by cesarean section. We try to overcome this limitation and provide credible causal evidence by using variation in the probability of having a c-section that is arguably unrelated to maternal and fetal characteristics: variation by time of day. Previous literature documents that, while nature distributes births and associated problems uniformly, time-dependent variables related to physicians’ demand for leisure are significant predictors of unplanned c-sections. Using a sample of public hospitals in Spain, we show that the rate of c-sections is higher during the early hours of the night compared to the rest of the day, while mothers giving birth at the different times are similar in observable characteristics. This exogenous variation provides us with a new instrument for type of birth: time of delivery. Our results suggest that non-medically indicated c-sections have a negative and significant impact on newborn health, as measured by Apgar scores, but that the effect is not severe enough to translate into more extreme outcomes.

## Working papers

[“The Impact of the Female Advantage in Education on the Marriage Market”](#), Lund University, Department of Economics Working Papers, No. 2021:5.

In recent years, the traditional gender gap in educational attainment in favor of men has been reversed in many countries. This development may have far-reaching consequences for the family, challenging traditional patterns of union formation and potentially affecting marriage and fertility outcomes. I study the implications of the female advantage in education on family formation through changes in the marriage market. My empirical strategy exploits the gradual implementation of a large school reform in Finland that increased women’s relative level of education. I analyze the reduced-form relationship between marriage market exposure to the reform and marriage and fertility outcomes. The results show that in marriage markets with a larger female advantage in education men had fewer children and were less likely to be in a couple by age 40. I provide suggestive evidence that these results are mostly driven by the mismatch between the distributions of educational attainment of men and women, and that they might have negative consequences for low-educated men’s health behaviors and mental health.
